

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

- I didn't need to rewrite the logic from scratch but repurpose the code. I mainly had to reorganise and restructure the code.

2. What parts of encapsulating your logic were hard?

- Ensuring that the encapsulated code maintains the same functionality and is testable.
- Integrating the code into my existing application, with minimal disruption to the existing code was my concern.

3. Is abstracting the book preview a good or bad idea? Why?

- Abstracting the book preview is a good idea.
- Reasons:
 - Makes the code readable and reusable.
 - Makes it easy to maintain, debug, and organise.
